

token recharge currency development instructions (Plan 1)

token recharge currency development instructions (Plan 2)

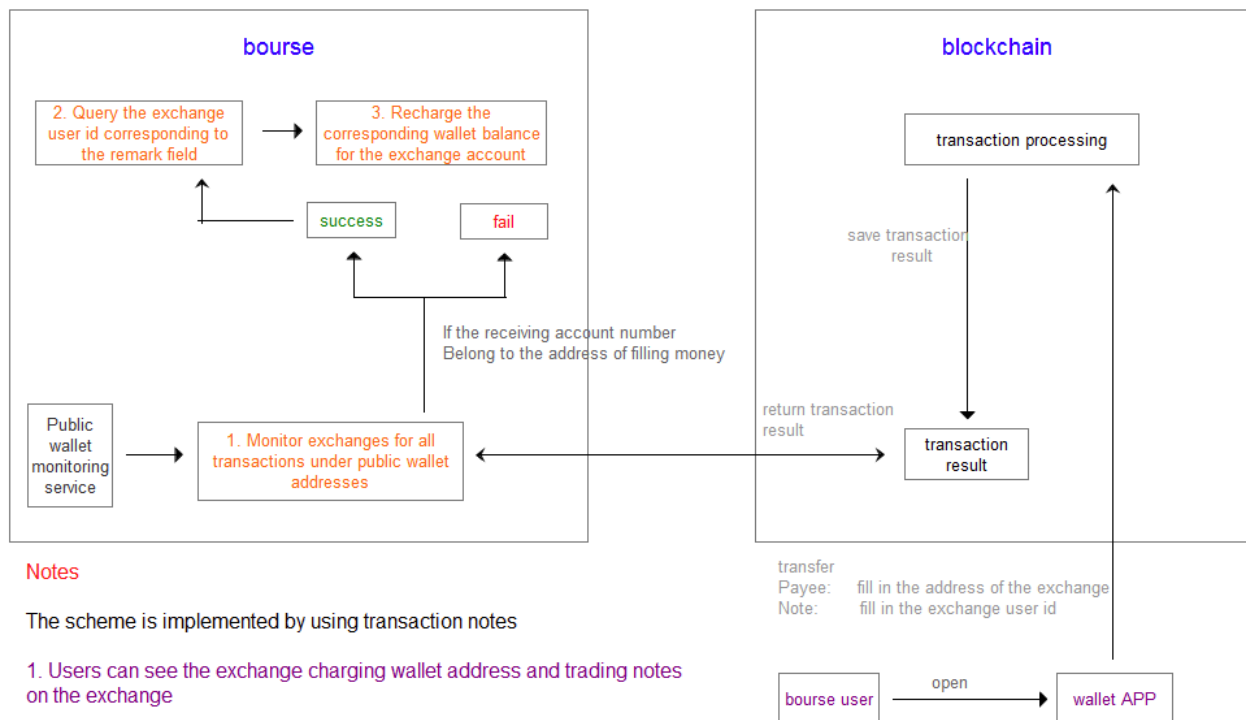

Notes

The scheme is implemented by using the user's own wallet address and exchange identity to force binding

1. The exchange requires users to transfer a specified amount of currency to the exchange's public account with their wallet address, which is used to verify the ownership of the wallet and record the relationship between the charging address and the user
2. Users can see the binding wallet address on the exchange, and exchange public wallet address
3. The user logs in the corresponding wallet and transfers the money to the exchange's public wallet address

token recharge currency development instructions (Plan 3)

Notes

The scheme is implemented by using transaction notes

1. Users can see the exchange charging wallet address and trading notes on the exchange
2. The user logs in the wallet, transfers the currency into the wallet address, and fills in the exchange user id in the note field
